Step up and help take control of your asthma

Living with severe asthma means that you could have symptoms one day but not another. Think back, have you:

 thở ✔️ used a rescue inhaler often to control your asthma symptoms?

🕒+woken up at night due to asthma symptoms?

📅 had an asthma attack that required emergency care?

📅+ taken oral steroids, like prednisone, for your asthma?

If you answered yes to any of these questions, you could have eosinophilic asthma.

APPROVED USE

FASENRA is an add-on maintenance treatment for patients 12 and older with severe eosinophilic asthma. FASENRA is not used to treat other problems caused by eosinophils and is not used to treat sudden breathing problems.

Asthma is not always predictable, but you can take an active role in its treatment by using this calendar to keep track of your symptoms over the next few weeks and discussing the results with your doctor.

IMPORTANT SAFETY INFORMATION

Do not use FASENRA if you are allergic to benralizumab or any of the ingredients in FASENRA.

Do not use to treat sudden breathing problems.

FASENRA may cause serious side effects, including:

- **allergic (hypersensitivity) reactions, including anaphylaxis.** Serious allergic reactions can happen after you get your FASENRA injection. Allergic reactions can sometimes happen hours or days after you get your injection. Tell your healthcare provider or get emergency help right away if you have any of the following symptoms of an allergic reaction:
  - swelling of your face, mouth and tongue
  - breathing problems
  - fainting, dizziness, feeling lightheaded (low blood pressure)
  - rash
  - hives

Please see additional Important Safety Information on next page and accompanying full Prescribing Information, including Patient Information.
What’s Next?

Take this information to your next appointment with your asthma specialist to discuss how asthma may be affecting you. If you only see a primary care doctor for your asthma, they may recommend that you speak with an asthma specialist such as an allergist or pulmonologist.

Below are some questions that can help start the conversation with your specialist and help determine if adding FASENRA would be a good option for you.

- What are eosinophils and how do they affect asthma?
- Could eosinophils be a cause of my asthma?
- How do I know if I have eosinophilic asthma?
- Can I get a blood test today to measure my eosinophil level?
- Could adding FASENRA help treat my asthma and help reduce my asthma attacks?
- Can adding FASENRA help reduce my use of oral steroids?
- What are some of the side effects of FASENRA?

WHEN IT COMES TO YOUR ASTHMA, DON’T SETTLE: ASK ABOUT FASENRA

IMPORTANT SAFETY INFORMATION (cont’d)

Before using FASENRA, tell your healthcare provider about all of your medical conditions, including if you:

- are taking oral or inhaled corticosteroid medicines. Do not stop taking your corticosteroid medicines unless instructed by your healthcare provider. This may cause other symptoms that were controlled by the corticosteroid medicine to come back.
- have a parasitic (helminth) infection.
- are pregnant or plan to become pregnant. It is not known if FASENRA will harm your unborn baby. Tell your healthcare provider if you become pregnant during your treatment with FASENRA.
  - There is a pregnancy exposure registry that monitors pregnancy outcomes in women exposed to FASENRA during pregnancy. Healthcare providers can enroll patients or encourage patients to enroll themselves by calling 1-877-311-8972 or visiting www.mothertobaby.org/fasenra.
- are breastfeeding or plan to breastfeed. It is not known if FASENRA passes into your breast milk. Talk to your healthcare provider about the best way to feed your baby if you use FASENRA.
- are taking prescription and over-the-counter medicines, vitamins, or herbal supplements.

Do not stop taking your other asthma medicines unless instructed to do so by your healthcare provider.

The most common side effects of FASENRA include: headache and sore throat. These are not all the possible side effects of FASENRA.

APPROVED USE

FASENRA is a prescription medicine used with other asthma medicines for the maintenance treatment of asthma in people 12 years and older whose asthma is not controlled with their current asthma medicines. FASENRA helps prevent severe asthma attacks (exacerbations) and may improve your breathing. Medicines such as FASENRA reduce blood eosinophils. Eosinophils are a type of white blood cell that may contribute to your asthma.

FASENRA is not used to treat other problems caused by eosinophils and is not used to treat sudden breathing problems. Tell your healthcare provider if your asthma does not get better or if it gets worse after you start treatment with FASENRA.

It is not known if FASENRA is safe and effective in children under 12 years of age.
